

eWheels medical assembly

1. **Standard Shipping** - The standard version this scooter comes disassembled, and securely packaged in a single heavy box. This can be taken out by yourself or with assistance from others.
2. **Assembled Shipping** - The assembled version of the scooter will arrive curbside in a single crate, fully assembled and ready to drive. We find this is a good option for people who need a bit of assistance. However, you'll need to remove the protective packaging and you may require the assistance of a friend to get it off the shipping pallet.
